

Botox, Dysport, Xeomin, and Jeuveau Post-Procedure Instructions

- 1. Do not heavily massage the treated area or wear tight hats or headbands around the area for four hours after the injections.**
- 2. Contract the muscles that were injected several times an hour for the next four hours.**
- 3. Very little pain should be associated with these injections. However, you may apply ice packs to the area if they are tender. You may also take Tylenol. Please do not take Ibuprofen or aspirin for 72 hours after the injections as they may increase the likelihood of bruising.**
- 4. Botox, Dysport and Jeuveau may take 7-14 days to show effects. The muscle weakness from these injections is temporary and will wear off in 3-6 months. Repeat injections will be necessary to maintain your results. In a very small percentage of people, Botox, Dysport and/or Jeuveau is not effective and no results occur.**
- 5. If you still have unwanted movement two weeks after your procedure, schedule a follow up appointment.**

If you have any questions or concerns, please call Genesis Medspa at 719-579-6890.
