

**Laser Genesis and Limelight
Post-Procedure Instructions**

1. You may resume normal activity immediately following your laser treatment.
2. You may experience slight swelling and/or redness for up to 48 hours after your treatment. You may apply cold compresses, hydrocortisone cream or Aquaphor to the treated area. If the area is extremely uncomfortable, or seems to be getting worse, please call Genesis Medspa at 719 579 6890.
3. Keep sunscreen on the treated areas at all times.
4. You may take Tylenol or Ibuprofen for any discomfort. If these do not relieve your discomfort, please call Genesis Medspa at 719 579 6890.
5. You should not use Retin-A or retinol until 72 hours after your treatment.
6. For clients who received a Limelight treatment – your skin likely will look worse before it looks better. Sunspots will appear darker before fading away. Your skin may start to peel 3-4 days after your treatment. Do not pick or scrub the peeling areas; let them peel naturally. Men should wait to shave until the peeling is complete. Wear sunscreen and protective clothing at all times.
